

## LM106/LM306 Voltage Comparator

### General Description

The LM106 series are high-speed voltage comparators designed to accurately detect low-level analog signals and drive a digital load. They are equivalent to an LM710, combined with a two input NAND gate and an output buffer. The circuits can drive RTL, DTL or TTL integrated circuits directly. Furthermore, their outputs can switch voltages up to 24V at currents as high as 10 mA.

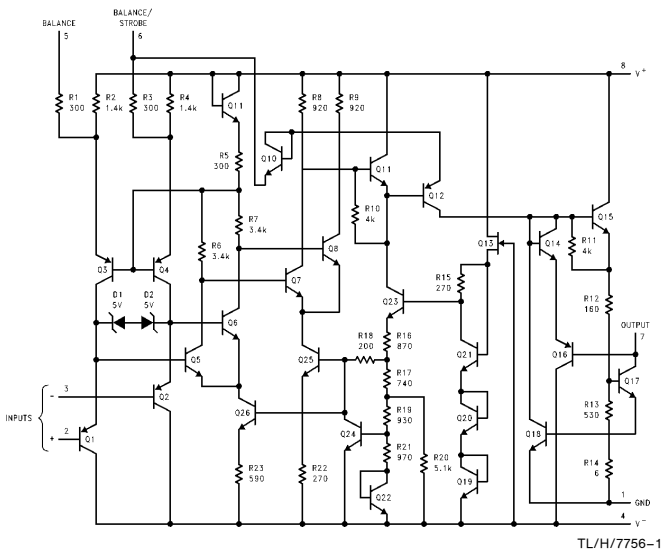

The devices have short-circuit protection which limits the inrush current when it is used to drive incandescent lamps, in addition to preventing damage from accidental shorts to the positive supply. The speed is equivalent to that of an LM710. However, they are even faster where buffers and additional logic circuitry can be eliminated by the increased flexibility of the LM106 series. They can also be operated from any negative supply voltage between  $-3V$  and  $-12V$  with little effect on performance.

The LM106 is specified for operation over the  $-55^{\circ}C$  to  $+125^{\circ}C$  military temperature range. The LM306 is specified for operation over  $0^{\circ}C$  to  $+70^{\circ}C$  temperature range.

### Features

- Improved accuracy
- Fan-out of 10 with DTL or TTL
- Added logic or strobe capability
- Useful as a relay or lamp driver
- Plug-in replacement for the LM710
- 40 ns maximum response time

### Schematic and Connection Diagrams

Note: Pin 4 connected to case.

**Order Number LM106H,  
LM106H/883† or LM306H  
See NS Package Number H08A**

† Available per SMD # 8003701

## Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications. (Note 6)

|                                   |      |
|-----------------------------------|------|
| Positive Supply Voltage           | 15V  |
| Negative Supply Voltage           | -15V |
| Output Voltage                    | 24V  |
| Output to Negative Supply Voltage | 30V  |
| Differential Input Voltage        | ±5V  |
| Input Voltage                     | ±7V  |

|                                       |   |
|---------------------------------------|---|
| Power Dissipation (Note 1)            | 600 mW  |
| Output Short Circuit Duration         | 10 seconds                                    |
| Operating Temperature Range           | <b>T<sub>MIN</sub></b> <b>T<sub>MAX</sub></b> |
| LM106                                 | -55°C to +125°C                               |
| LM306                                 | 0°C to +70°C                                  |
| Storage Temperature Range             | -65°C to +150°C                               |
| Lead Temperature (Soldering, 10 sec.) | 300°C   |
| ESD rating to be determined.          |   |

## Electrical Characteristics (Note 2)

| Saturation Voltage                                      | V <sub>IN</sub> ≤ -5 mV, I <sub>OUT</sub> = 16 mA<br>V <sub>IN</sub> ≤ -8 mV For LM306  |      |             | 0.4        |      |          | 0.4        | V              |
| Positive Output Level                                   | V <sub>IN</sub> ≥ 5 mV, I <sub>OUT</sub> = -400μA<br>V <sub>IN</sub> ≥ 8 mV For LM306   | 2.5  |             | 5.5        | 2.5  |          | 5.5        | V              |
| Output Leakage Current                                  | V <sub>IN</sub> ≥ 5 mV, 8V ≤ V <sub>OUT</sub> ≤ 24V<br>V <sub>IN</sub> ≥ 8 mV For LM306<br>T <sub>L</sub> ≤ T <sub>A</sub> ≤ 25°C<br>25°C < T <sub>A</sub> ≤ T <sub>H</sub> |      |             | 1.0        |      |          | 2.0        | μA             |
| Strobe Current  | V <sub>STROBE</sub> = 0.4V  |      | -1.7        | -3.2       |      | -1.7     | -3.2       | mA             |

## Electrical Characteristics (Note 2) (Continued)

| Parameter               | Conditions   | LM106 |      |      | LM306 |      |      | Units |
|-------------------------|--|-------|------|------|-------|------|------|-------|
|                         |  | Min   | Typ  | Max  | Min   | Typ  | Max  |       |
| Strobe "ON" Voltage     |  | 0.9   | 1.4  |      | 0.9   | 1.4  |      | V     |
| Strobe "OFF" Voltage    | $I_{SINK} \leq 16 \text{ mA}$                                  |       | 1.4  | 2.2  |       | 1.4  | 2.2  | V     |
| Positive Supply Current | $V_{IN} = -5 \text{ mV}$<br>$V_{IN} = -8 \text{ mV}$ for LM306 |       | 5.5  | 10   |       | 5.5  | 10   | mA    |
| Negative Supply Current |  |       | -1.5 | -3.6 |       | -1.5 | -3.6 | mA    |

**Note 1:** The maximum junction temperature of LM106 is 150°C, LM306 is 85°C. For operating at elevated temperatures, devices must be derated based on a thermal resistance of 170°C/W, junction to ambient, or 23°C/W, junction to case.

**Note 2:** These specifications apply for  $-3\text{V} \geq V^- \geq -12\text{V}$ ,  $V^+ = 12\text{V}$  and  $T_A = 25^\circ\text{C}$  unless otherwise specified. All currents into device pins are considered positive.

**Note 3:** The offset voltages and offset currents given are the maximum values required to drive the output down to 0.5V or up to 4.4V (0.5V or up to 4.8V for the LM306). Thus, these parameters actually define an error band and take into account the worst-case effects of voltage gain, specified supply voltage variations, and common mode voltage variations.

**Note 4:** The response time specified (see definitions) is for a 100 mV input step with 5 mV overdrive.

**Note 5:** All currents into device pins are considered positive.

**Note 6:** Refer to RETS106X for LM106 military specifications.

## Typical Applications

Level Detector and Lamp Driver

TL/H/7756-4

Fast Response Peak Detector

TL/H/7756-5

Relay Driver

TL/H/7756-6

Adjustable Threshold Line Receiver

\*Optional for response time control.

TL/H/7756-7

# Typical Performance Characteristics

**LIFE SUPPORT POLICY**

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform, when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
